NOTE: Please ensure you have a backup of your device before applying the jailbreak. While data loss is unlikely, we won't be responsible if something goes wrong. Use at your own risk.

Options   Start

Jailbreak Device & Bypass Activation Lock Screen

Click on "Option" button. New opened screen will display several checkboxes. You need the first one saying "Allow untested iOS version", check it and click on "Back" button:

Next Checkra1n screen will display instructions on putting your device into [DFU mode](#) for the purpose of jailbreaking process initiation

3 Jailbreak Device & Bypass Activation Lock Screen

iR
iRemove Tools
Apple ID Bypass Software
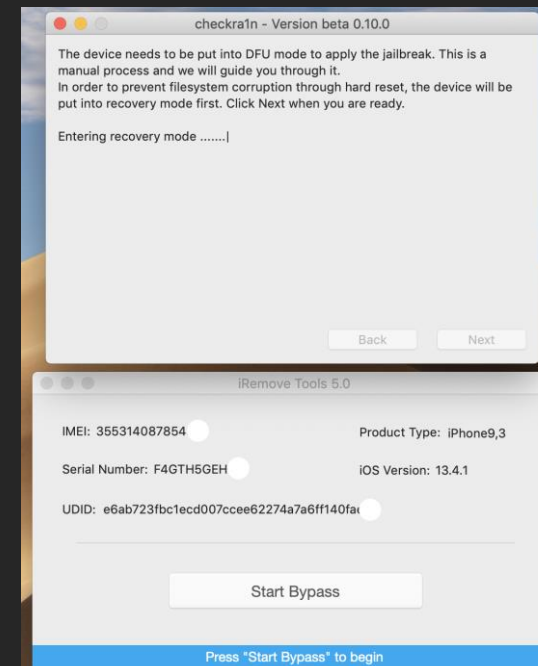

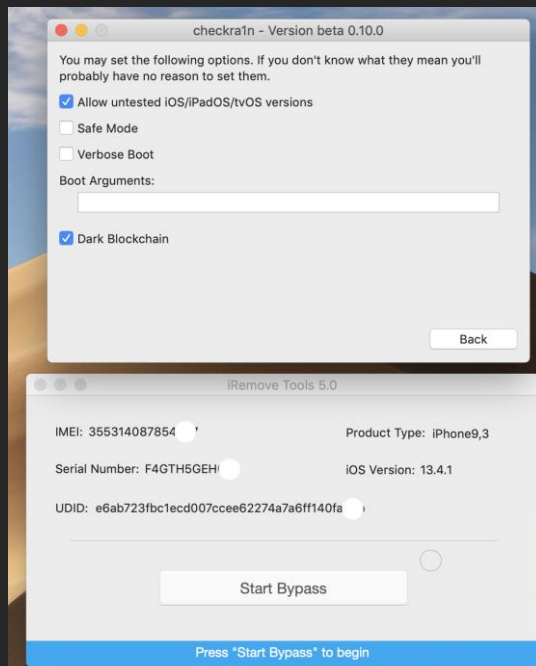

The exploitation and jailbreaking processes will start once your device is in DFU mode. Verbose log of the jailbreaking process will be displayed on the device's screen throughout entire jailbreaking process. DO NOT do anything with your mobile device and Mac PC. Just be patient and let them do what they do. In case jailbreaking process is completed successfully, "All Done" message will appear. Please refer to common issues page if you receive error message.
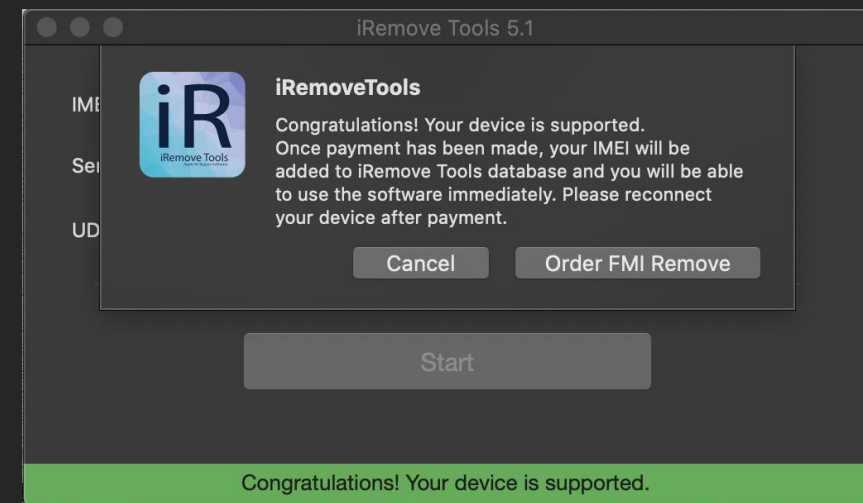

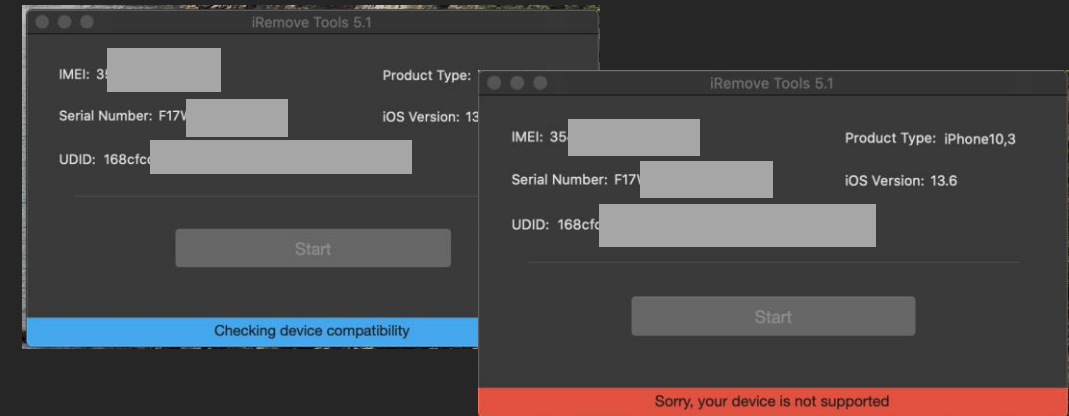

2 Verify Device & Place Order

iRemove Tools
Apple ID Bypass Software
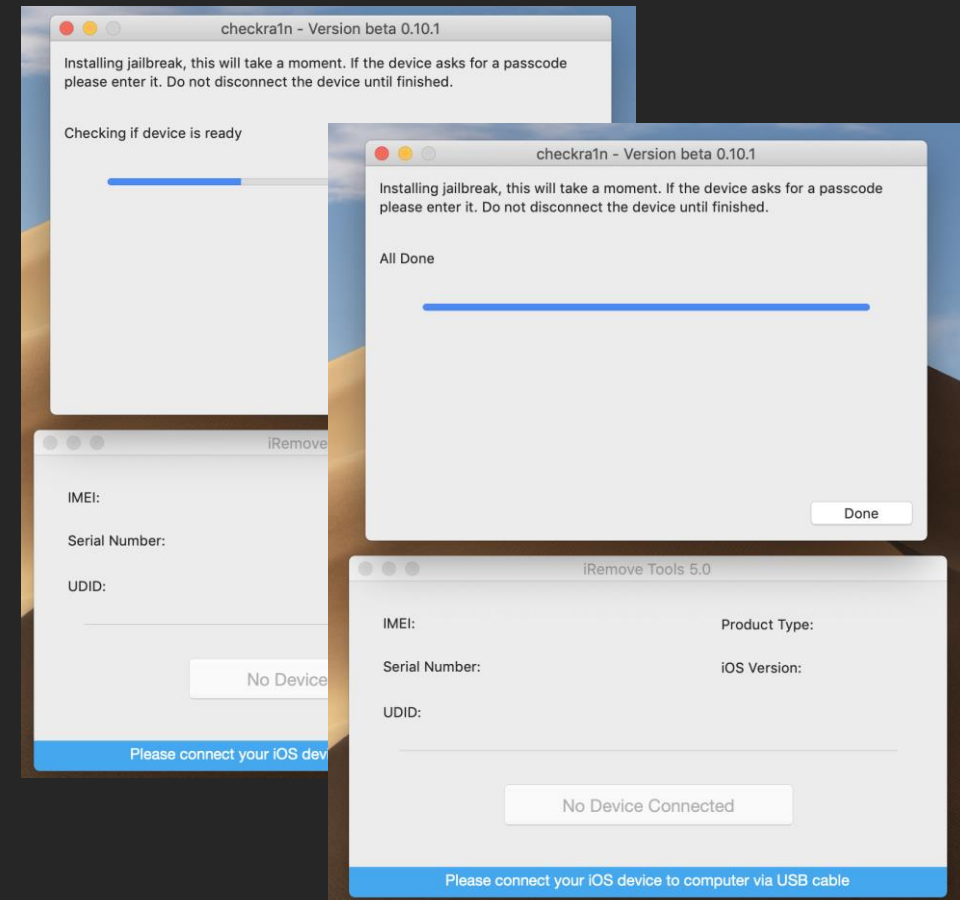

Run iRemove iCloud FMI OFF Software. Click on the App's icon or Launchpad and open iRemove Software. Connect you iPhone or iPad to Mac PC with USB cable.

iRemove iCloud FMI OFF Software will check your device's compatibility. If your device is supported, the software will detect it and redirect you to the payment page. Otherwise, the software will notify you that your device is not supported!
